

What is Ralph?

Ralph is a voice commanded home control, monitoring, and supervisory system. It uses voice recognition to take commands from the homes occupants and talks back to them with speech synthesis. For those that cannot, or would rather not use the voice system, pushbutton control of Ralph is available. A sophisticated artificial intelligence (AI) system handles conditions outside of its typical programming..

The system has additional modules that can be added to include medication reminders, monitoring for movement in home, call specific people if certain conditions exist. Each Ralph system consists of numerous modules that together allow the system to perform the required tasks and can have additional modules loaded as needed for additional capabilities. Modules are available in several categories that include assistance to handicapped, assistance for blind, general home automation, home heating and air conditioning, home security, internet, home theater and remote control plus many others.

Using Assistive Technology to Improve the Quality of Life

RALPH
HOMES ARE
HAPPY HOMES

They are friendly, secure and convenient

Ralph adds value to any home

If you are a contractor or builder it can help increase your profits and generate business.

Ralph can add perceived value to any house. Imagine how much more buyers will want your houses when they can introduce themselves, talk to them and demonstrate their many features. You won't be able to build houses fast enough when Ralph lives in them!

Everybody's Lifestyle
is Unique

Ralph can adapt to any lifestyle, so any home will customize itself to their new owners! For those people with busy lifestyles, Ralph can keep track of each persons schedule, reminding them of appointments, keeping track of shopping lists, reminding them to pick up people or items and helping to organize their lives.

Ralph becomes your personal Butler, Valet and Concierge

For homes with older children, Ralph can help keep track of their coming and going, knowing when they should be home from school or friends, and can call you if they don't get home on time, or leave unexpectedly.

Ralph can even help if there are pets in the house. RALPH can feed and water the pets while people are out of town on business, vacations or just too busy to remember. The pets will thank their owners since RALPH doesn't forget or not have time for them.

It's the Home of the Future
that's here today!

The RALPH technology has been designed to add value to any home and do it at very low cost. By controlling heating & air conditioning, lighting and television/stereo equipment, RALPH becomes a perfect home automation system for any home, and at its low price its ideal for the small to medium sized home as well as the largest!

Because it uses advanced artificial intelligence, RALPH can make life much easier for everyone, Simply ask RALPH to add any item you need to your shopping list and he will do it and then print you the list when you are ready to go shopping. You can set up "scenes" so you can tell RALPH you want to watch TV and he will close the appropriate drapes, dim the lights, turn on the TV and answer the phone so as not to disturb you. You can tell Ralph you are hosting a party and he will set the mood in the house through lighting and mood music throughout the house.

Imagine waking up in the morning to RALPH reading you the latest news and weather while he has ran a tub of perfectly tempered water and made coffee. Now that is living in the lap of luxury!

To find out more, just contact us and find out how surprisingly inexpensive it is to have an intelligent house of the future today! Why not enjoy a lifestyle only dreamed of in science fiction until today! We have turned science fiction into science fact...
